ACD Systems ACDSee Pro 6

ACD Systems

ACD Systems is one of the largest and most respected independent digital image editing and management companies in the world. The company was founded in 1993 in Texas by technology and imaging visionary Doug Vandekerkhove. Doug foresaw the importance of the convergence of analog and digital (print, photos, scans, video and metadata) in the 80's, revolutionizing how analog and digital information was used in pre-Web applications. Today ACD holds seven patents, and millions of ACDSee products are in use throughout the world.

ACD Systems has offices in the United States and Canada, supported by a team of global channel partners. With a product family that includes ACDSee Pro 6, ACDSee Pro 2 (Mac), ACDSee 16 photo editing and management solutions, and Canvas technical illustration software, the company serves millions of consumers, small and medium sized businesses, government agencies and educational institutions, and corporate customers.

Representative markets for ACD Systems' products include AEC (architecture, engineering and construction), insurance, manufacturing, aerospace, automotive, government, architecture/construction, education, gaming, technology, bio/health and oil/gas/energy. Customers include General Motors, Caterpillar, Boeing, The New York City Fire Department, NASA, CNN and the Royal Canadian Mounted Police. ACDSee software was used in the making of the movie Titanic because the filmmakers recognized that only ACDSee could provide the illustration, editing and management tools required for their large scale, complex development tasks and image management requirements.

acdsee™ PRO 6
 Total Photography Control

- Windows 8 Ready
- Patented LCE
- Native 64-bit Support
- Hierarchical Keywords
- Non-Destructive
- Adjustment Brush

Total Photography Control

Packed with new features requested by professional photographers and advanced amateurs, ACDSee Pro 6 has

everything you need to perfect your images, fast. Carry out digital asset management and all the essential tasks of your photography workflow, from import to final presentation, in one complete solution. Add in a powerful RAW processing engine, improved color management, and more non-destructive processing tools - all running in a native 64-bit application - and you'll quickly see the difference in your images. Achieve stunning results, stay organized, save time. ACDSee Pro 6 gives you total photography control.

What's New in ACDSee Pro 6

So many new features. So much time saved. Make your best photos even better, with time to spare, thanks to a host of new features that deliver the precision your photos deserve.

Workflow

Super Fast Performance

High resolution images require high amounts of handling power. Speed up your image processing and zoom through your workflow tasks, thanks to ACDSee Pro 6's native 64-bit support for Windows operating systems.

Hierarchical keywords

Save time and stay on top of your growing collection by creating keyword hierarchies that span from the general to the very specific. For example, say you've created this structure: Transportation | Cars | Vintage. When you assign an image of a Model-T to the Vintage keyword with a check of a box, it automatically gets added to the higher keyword levels. Click on a keyword in the Catalog pane or use Quick Search to display all of the files assigned to that keyword. Create as many levels as you need to fully and accurately classify your assets.

Improved color management

Achieve a consistent color workflow. Reworked from the ground up, ACDSee Pro 6's color management system resolves color matching issues that can occur between different devices with much more accurate color matching and higher quality results. Plus, multi-monitor support is now included.

Burn to Blu-Ray

Quickly and easily archive your images to Blu-Ray discs, directly from within ACDSee.

Photo Developing

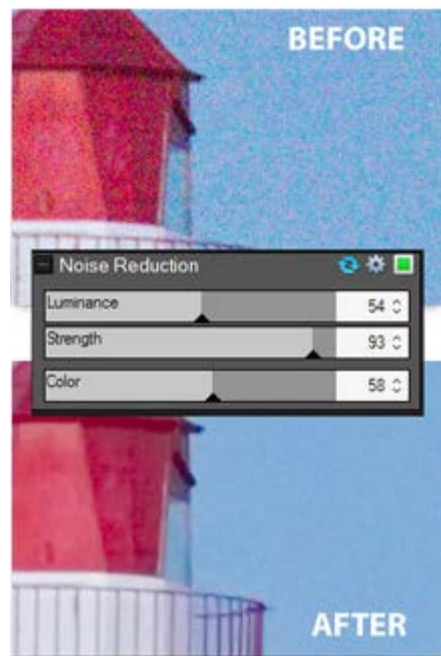

Non-destructive adjustment brush

Make non-destructive adjustments to select areas of your images using a versatile brush to precisely get the look you want. Subtly or dramatically correct exposure, add clarity, boost vibrance and more.

Pro Tip!

Use the scroll wheel on your mouse to increase or decrease the size of your brush while applying it.

Improved noise reduction and sharpening

Rescue your high ISO images with ACDSee's significantly improved noise reduction technology to get smoother and more natural results, while retaining as much edge detail as possible. Plus, the new Detail slider adds control over the sharpening process by feathering or softening the sharpening halos.

Better black and white

Take your monochrome images to a whole new level of creativity with the dedicated black and white mode. Make high-quality non-destructive hue-based brightness adjustments and experiment with saturation-based tinting that allows you to add a specific hue back to a black and white image.

New processing tools

Target midtones to make intuitive adjustments to your images – give a little extra definition to details with the Clarity tool, or get dreamy with Soft Focus. Use Cross Process to add a surreal, retro look. Or draw attention to a cropped portion of your image with Post-Crop Vignetting, complete with feathering, radius and roundness controls. Plus, you can now non-destructively reduce red-eye.

Advanced color improvements

Adjust individual or overall color in your images with improved Advanced Color tools, built on a higher quality algorithm that uses modern color models for higher quality and more perceptual color adjustments. Add in more intuitive controls, and you can subtly fine-tune or dramatically change the hue, saturation, and lightness, for remarkably better results.

Photo Editing

Brush on edits

Quickly brush on any editing effect or adjustment to a specific area of your photo, complete with size and feathering controls. For even more flexibility, combine your edits with different blend modes for the ultimate in control and creativity.

Blur smartly

Apply the new Smart Blur filter in Edit Mode as a creative effect, or to reduce the noise in your image. Smooth out the grain and noise patterns between edges while still retaining the sharpness and important details of your shot.

System Requirements

Hardware

- Intel® Pentium® III / AMD Athlon processor or equivalent (Intel® Pentium® 4 / AMD Athlon XP or equivalent recommended)
- 512 MB RAM (1 GB RAM recommended)
- 310 MB free hard drive space (1 GB recommended)
- High Color display adapter at 1024 x 768 resolution (1280 x 1024 recommended)
- CD/DVD Burner - for creating CDs and DVDs

Software

- Microsoft® Windows® XP with Service Pack 3, Windows Vista® or Windows® 7, or Windows® 8 operating system.
- Microsoft® Internet Explorer® 7+
- Microsoft® DirectX® 9.0c
- Ghostscript 8.0 - for PDF support
- Windows Media® Player 9.0
